

ScaleGone .5

Model SC1.5

Flush Interior Guaranteed!

Most ice maker problems are water related. All water contains calcium that turns to scale in a temperature exchange. Scale deposits that accumulate cause abrasion and clogging that requires excessive maintenance. When scale removal is necessary, harsh acids are used to dissolve hard scale. This maintenance treatment reduces component life and ChillTech effectiveness.

ScaleGone neutralizes the calcium in water to the ChillTech, therefore eliminating scale-forming water within the ChillTech. ScaleGone dispenses a inhibitor "Cytryne" that neutralizes calcium in water. The Cytryne is a food additive that is approved by the Food and Drug Administration (FDA). The small amount of Cytryne dispensed to the ChillTech is safe for the for up to six months.

- ScaleGone1.5 cleans the lines to improves performance. Like cleaning out those arteries.
- We GUARANTEE ScaleGone1.5 against manufactures defects for the life of the product.
- C ChillTech SG1.5 is a "smart" accessory

“Improve ChillTech performance. Quick Clean.”

Approved Materials

ScaleGone .5

DCM Ice Maker Scale Control

Specifications

Maximum Pressure.....	125 psi non shock
Maximum Temperature.....	100°F
Flow Rate	2.0 gpm
Mounting Bracket.....	Polished Aluminum
Easy Connect Fittings.....	3/8" or 1/4"
Dimensions.....	8.5 H X 2.5 W
Shipping Weight.....	4 lbs.

Installation

ScaleGone .5 can be installed on all DCM ice makers

ScaleGone is installed after the water filter and before the ice maker. ScaleGone can be installed on a 3/8" or 1/4" water line.

No tools necessary!
